

ENTERPRISE CAPABILITY PROFILE — 2026

Precision-Grade AI Data Annotation at Enterprise Scale.

Human-verified training data for computer vision and machine learning — bounding box, polygon, segmentation, keypoint, cuboid, OCR and video annotation, delivered through a rigorous three-level quality framework.

15+

ANNOTATION TYPES

10+

INDUSTRIES SERVED

3-Level

QUALITY ASSURANCE

AI-VERIFIED ANNOTATION OUTPUT

Engineered for the data that trains great AI.

Precise BPO Solution is a specialist data annotation and enterprise process partner, built to give AI and computer vision teams a dependable, secure, and scalable source of ground-truth data.

Our Mission

To deliver precise, human-verified annotated data that allows AI and machine learning teams to build models they can trust in production.

Our Vision

To be the most reliable annotation partner for enterprises scaling computer vision — across every industry, geography and data modality.

Why Companies Choose Us

- ✓ Rigorous 3-level QA on every batch
- ⚡ Rapid pilot-to-production ramp
- 📦 Every format & tool supported
- 👥 Dedicated, trained annotation pods
- 🔒 Enterprise-grade data security
- 🕒 Flexible turnaround windows

AT A GLANCE

15+

Annotation & labeling techniques

10+

Industry verticals served

24/7

Follow-the-sun delivery capability

99%+

Client-audited label accuracy target

We operate as an embedded extension of our clients' ML teams — combining trained human annotators, structured QA, and AI-assisted tooling to keep pace with production-scale data pipelines.

WHERE WE OPERATE

Industries We Serve

Domain-trained annotation pods calibrated to the visual language, edge cases and compliance needs of each sector.

Manufacturing

Defect detection, weld & surface QA

Healthcare

Medical imaging & diagnostic support

Agriculture

Crop health, yield & drone imagery

Retail

Shelf analytics & inventory vision

Sports

Player tracking & performance analytics

Automotive

Autonomous driving perception data

Construction

Site safety & progress monitoring

Logistics

Warehouse, fleet & cuboid annotation

Drone Imagery

Aerial survey & mapping datasets

Satellite

Geospatial & remote sensing AI

COVERAGE ACROSS THE COMPUTER VISION STACK

01

Image Capture

02

Preprocessing

03

Annotation

04

Multi-Level QA

05

Model-Ready Export

Our AI Annotation Services

A complete, format-agnostic annotation stack — engineered for every computer vision task, from rapid prototyping to production-scale training data.

Bounding Box

Rapid rectangular object localization

Polygon

Precise irregular-boundary outlines

Semantic Segmentation

Pixel-level class region mapping

Instance Segmentation

Per-object pixel-accurate masks

Polyline

Roads, lanes, rail & pipeline paths

Keypoint / Pose

Skeletal landmark annotation

Cuboid (3D Box)

Volumetric object annotation

OCR & Document AI

Text, field & table extraction

Video Annotation

Multi-frame object tracking

Image Classification

Single & multi-label tagging

Bounding Box Annotation

Fast, high-volume rectangular object localization for detection and tracking models.

EXAMPLE: MULTI-OBJECT BOUNDING BOX DETECTION

APPLICATIONS

Object Detection

Inventory Counting

People Counting

Shelf Monitoring

INDUSTRIES

Retail

Manufacturing

Security

Logistics

WORKFLOW

- 1 Guideline calibration on client taxonomy
- 2 Annotators draw tight rectangular boxes
- 3 Peer QA verifies tightness & class
- 4 Client-format export

OUTPUT FORMATS

YOLO

COCO

Pascal VOC

CSV

Polygon Annotation

Vertex-level precision for irregular object boundaries
— where a rectangle is not enough.

MANUFACTURING

WELD SEAM & PANEL OUTLINE

MEDICAL

CELL & TISSUE BOUNDARY

SATELLITE

BUILDING & PARCEL FOOTPRINT

AGRICULTURE

CROP ROW & CANOPY OUTLINE

Semantic Segmentation

Every pixel classified into a category — the foundation for scene understanding models.

EXAMPLE: ROAD SCENE SEGMENTED BY PIXEL CLASS

Pixel-Level Explanation

Unlike bounding boxes or polygons, semantic segmentation assigns a class label to *every single pixel* in the frame — grouping all pixels of the same category (road, sky, vegetation) without distinguishing individual instances.

Medical Imaging

Organ, tumor and tissue region mapping across MRI and CT slices for diagnostic AI.

Autonomous Driving

Full scene parsing — drivable surface, lane, sidewalk and obstacle classes per frame.

Instance Segmentation

Pixel-accurate masks that separate every individual object instance — even within the same class.

EXAMPLE: THREE DISTINCT INSTANCES, INDIVIDUALLY MASKED

Bounding Box vs. Polygon vs. Mask

Choosing the right technique is a trade-off between annotation speed and boundary precision. Our delivery leads guide clients to the lightest option that still meets accuracy targets.

TECHNIQUE	BEST FOR
Bounding Box	Fastest turnaround, coarse rectangular region
Polygon	Balanced speed & precision, vertex-defined edges
Segmentation Mask	Highest fidelity, full pixel-level coverage

BOUNDING BOX

Fast rectangular localization

POLYGON

Precise irregular-edge outline

SEGMENTATION MASK

Pixel-perfect region coverage

Polyline Annotation

Continuous path tracing for linear infrastructure and navigation features.

EXAMPLE: ROAD CENTERLINE & LANE PATH TRACING

APPLICATIONS

Lane Detection

Route Mapping

Network Tracing

HD Map Creation

INDUSTRIES

Autonomous Driving

Utilities

Rail

Oil & Gas

WORKFLOW

- 1 Reference path guidelines defined
- 2 Annotators trace continuous vertices
- 3 QA checks continuity & class
- 4 Export to mapping pipeline

OUTPUT FORMATS

JSON

CVAT XML

GeoJSON

XML

Keypoint / Pose Annotation

Skeletal landmark placement for pose estimation, motion analysis and biomechanics.

EXAMPLE: 14-POINT HUMAN POSE SKELETON

APPLICATIONS

Pose Estimation

Motion Analysis

Form & Technique Scoring

Gesture Recognition

INDUSTRIES

Sports

Healthcare & Rehab

Agriculture

Fitness Tech

WORKFLOW

- 1 Landmark schema aligned to model spec
- 2 Points placed & skeleton linked
- 3 Occlusion & visibility flagged
- 4 QA validates joint sequence

OUTPUT FORMATS

COCO Keypoints

JSON

CSV

Cuboid (3D Box) Annotation

Volumetric bounding for depth-aware perception in warehouse, logistics and vehicle applications.

EXAMPLE: WAREHOUSE PALLET CUBOID ANNOTATION

APPLICATIONS

Volume Estimation

3D Object Detection

Space Planning

Fleet Perception

INDUSTRIES

Logistics

Warehousing

Automotive

Manufacturing

WORKFLOW

- 1 Depth & LiDAR reference calibrated
- 2 3D cuboid drawn to object extent
- 3 Cross-frame consistency review
- 4 Export with orientation metadata

OUTPUT FORMATS

JSON

KITTI

PCD

XML

OCR & Document Annotation

Structured field, table and text-line extraction from scanned and photographed documents.

EXAMPLE: STRUCTURED FIELD EXTRACTION ON AN ID DOCUMENT

APPLICATIONS

Invoices & Receipts

Passports & ID

Forms

Table Extraction

INDUSTRIES

Banking & Finance

Insurance

Government

Logistics

WORKFLOW

- 1 Document layout regions defined
- 2 Field-level bounding & transcription
- 3 Cross-checked against source text
- 4 Structured JSON/CSV delivery

OUTPUT FORMATS

JSON

CSV

XML

ALTO

Video Annotation

Frame-by-frame object tracking, action tagging and event annotation across video sequences.

EXAMPLE: MULTI-FRAME OBJECT TRACKING WITH PERSISTENT IDS

APPLICATIONS

Object Tracking

Action Recognition

Event Tagging

Anomaly Detection

INDUSTRIES

Sports

Autonomous Driving

Security

Retail

WORKFLOW

- 1 Key-frame annotation established
- 2 Interpolation across intermediate frames
- 3 Track ID consistency QA
- 4 Frame-indexed export

OUTPUT FORMATS

CVAT Video

COCO Video

JSON

MOT

Image Classification

Single and multi-label tagging for scene, product and quality classification models.

EXAMPLE: BINARY DEFECT / NO-DEFECT CLASSIFICATION

APPLICATIONS

Quality Screening

Content Moderation

Scene Tagging

Product Categorization

INDUSTRIES

Manufacturing

Retail

Media

Agriculture

WORKFLOW

- 1 Taxonomy & label set finalized
- 2 Annotators assign labels per image
- 3 Label-agreement QA sampling
- 4 Delivery in client schema

OUTPUT FORMATS

CSV

JSON

TXT

Manufacturing Use Cases

Precision annotation for industrial quality control and defect detection AI.

ANNOTATION TYPES USED

Polygon

Segmentation

Bounding Box

Classification

Weld Seam Polygon

Precise outline of weld beads for defect classification

Surface Defect Masking

Pixel-level scratch, dent & corrosion regions

PCB Component Detection

Bounding box detection of circuit board components

Rust & Corrosion

Segmentation of corrosion progression over time

Scratch Detection

Fine-boundary polygon annotation of surface scratches

Industrial AI Pipelines

End-to-end labeled datasets for predictive maintenance

Healthcare Annotation

HIPAA-aware annotation workflows for diagnostic imaging and medical AI.

ANNOTATION TYPES USED

Segmentation

Polygon

Keypoint

Classification

Tumor Boundary Mapping

Polygon & mask annotation for oncology detection models

MRI Slice Segmentation

Multi-slice organ and lesion segmentation

CT Scan Annotation

Volumetric region labeling across CT sequences

Cell Counting

High-density instance detection for pathology slides

Medical Segmentation

Pixel-accurate tissue and structure delineation

Agriculture Annotation

Crop-level labeling for yield prediction, health monitoring and precision farming.

ANNOTATION TYPES USED

Bounding Box

Segmentation

Polygon

Classification

Fruit & Crop Counting

Instance detection for yield estimation models

Plant & Weed Detection

Bounding box classification of crop vs. weed

Disease Segmentation

Pixel-level mapping of blight and disease spread

Drone Imagery Annotation

Large-scale aerial field & canopy labeling

Sports Analytics

Frame-accurate tracking and pose data that powers performance analytics platforms.

Player Tracking

Persistent multi-object tracking across broadcast footage

Ball Detection

High-speed small-object detection frame by frame

Pose Estimation

Joint-level skeleton annotation for technique analysis

Cricket Analytics

Shot, pitch & delivery event annotation

Football Analytics

Formation, possession & event tagging

Retail Annotation

Shelf-level computer vision data for inventory accuracy and merchandising AI.

Shelf Analytics

Planogram compliance & stock-out detection labeling

Product Detection

SKU-level bounding box annotation at scale

Inventory Counting

Dense instance counting across shelf imagery

Barcode & Label Region

Field-level annotation for OCR pipelines

Construction Annotation

Site safety and progress-monitoring datasets for jobsite computer vision.

PPE Compliance

Detection of helmets, vests & safety equipment

Crack Detection

Fine polyline & mask annotation of structural cracks

Building Segmentation

Structure & material region segmentation

Equipment Detection

Cuboid annotation of heavy machinery & vehicles

Autonomous Driving

Perception-grade labeling for ADAS and self-driving model development.

ANNOTATION TYPES USED

Cuboid

Polyline

Segmentation

Bounding Box

Vehicle Detection

Multi-class bounding box & cuboid annotation

Lane Marking

Continuous polyline annotation of lane geometry

Traffic Sign Recognition

Classification & localization of signage

Pedestrian Detection

High-recall bounding box & keypoint annotation

Scene Segmentation

Full-frame drivable-surface segmentation

Geospatial & Satellite

Large-scale earth observation annotation for mapping and infrastructure AI.

Satellite Object Detection

Vehicle, vessel & structure detection at scale

Building Footprint Mapping

Polygon annotation of structures for urban mapping

Road Network Tracing

Polyline annotation of road & transit networks

Water Body Segmentation

Pixel-level hydrology & terrain classification

Forest & Land Cover

Vegetation and land-use segmentation

Three-Level Quality Assurance

Every deliverable passes through a structured, three-tier review before it reaches a client — engineered to catch errors before they compound into model risk.

Peer Reviewer — 100% First-Pass Check

Every annotated asset is independently reviewed by a second trained annotator before it advances.

Team Lead Audit — Random Sampling

Team leads pull statistically significant random samples for deeper accuracy & consistency audits.

Client Review — Final Sign-Off

Clients receive a structured review batch with full traceability before production acceptance.

Project Workflow

A predictable, transparent path from first conversation to production-scale delivery.

Confidentiality First

NDA executed before any client data is transferred or reviewed.

Pilot-Validated

Small pilot batch confirms guideline accuracy before scaling.

Dedicated Pods

Named annotation & QA teams stay consistent across the engagement.

Continuous Support

Post-delivery support & guideline refinement as models evolve.

DELIVERY SPECIFICATION

Output Formats

Annotated datasets delivered in the exact schema your training pipeline expects — no post-processing required.

YOYOLO

COCO

PaPascal VOC

JSJSON

XMXML

CSCSV

TXTXT

CVCVAT XML

FORMAT	TYPICAL USE
YOLO	Plain-text normalized coordinates for real-time detection models
COCO	JSON schema with rich metadata for detection & segmentation
Pascal VOC	XML annotation format, widely supported by legacy pipelines
CVAT XML	Native interchange format for CVAT-based review & audit

Supported Annotation Tools

Our teams are cross-trained across the leading open-source and commercial annotation platforms — plus your own proprietary tools.

CVAT

Open-source video & image annotation

Labellmg

Lightweight bounding box annotation

VIA

VGG Image Annotator for polygons & regions

Label Studio

Configurable multi-modal labeling

Supervisely

Advanced segmentation & DNN-assisted labeling

Client Platforms

We annotate directly inside your proprietary tooling

Technology Stack

A secure, cloud-native delivery environment built around AI-assisted annotation and real-time quality visibility.

Cloud Delivery Infrastructure

Scalable cloud workspaces for distributed annotation teams and elastic capacity.

AI-Assisted Annotation

Model-in-the-loop pre-labeling accelerates throughput while humans verify & refine.

Secure Storage

Encrypted at-rest and in-transit storage with role-based access control.

Version Control

Full annotation history, rollback and audit trail on every asset.

Quality Dashboard

Real-time accuracy, throughput and QA metrics visible to clients.

Access Governance

Granular permissions and activity logging across every workspace.

Case Studies

A snapshot of anonymized engagements across the industries we serve — client names withheld under NDA.

Manufacturing

Weld-defect polygon annotation across 480K images for a Tier-1 automotive supplier.

98.7% QA Accuracy

9 Days Pilot to Production

Sports

Multi-camera player & ball tracking for a professional league analytics platform.

96.4% Tracking Precision

40+ Annotators Deployed

Agriculture

Drone-imagery fruit counting & disease segmentation across 12 farm regions.

97.9% Label Accuracy

6 Weeks Full Season Coverage

Medical

Tumor boundary segmentation across multi-slice MRI datasets for a diagnostics AI lab.

99.1% Reviewer Agreement

HIPAA-Aware Handling Protocol

Retail

Shelf-level SKU detection & OCR across 25 store formats for a global retailer.

97.2% Detection Accuracy

72 Hrs Turnaround SLA

Why Precise BPO Solution

Six commitments that shape every engagement, from a five-thousand-image pilot to a multi-year production partnership.

Global Delivery

Follow-the-sun teams enabling continuous throughput across time zones.

Flexible Teams

Elastic pods that scale up or down with your model development cycle.

Security First

NDA-backed, access-controlled handling of every client dataset.

Consistent Quality

Three-level QA framework applied without exception, batch after batch.

Fast Turnaround

Pilot-validated guidelines mean production ramps in days, not months.

Competitive Pricing

Transparent, volume-based pricing with no hidden review costs.

Let's build the data foundation for your **next AI model.**

Reach out to scope a pilot batch, discuss annotation guidelines, or request a formal proposal tailored to your dataset.
